Continuation of 11. does NOT place the application in condition for allowance because:

Claims 1-35 remain rejected under U.S.C. 35 103 (a) over US '538 for Granger. The main gist of applicants' argument is that there is no suggestion in Granger that the antagonist combination could be used in transdermal patch without the use of the barrier separating the active agent and its antagonist. Granger fails to teach all the claimed limitation and fails to establish prima facie case of obviousness. Claims 8 and 18 specify the combination of agonist and antagonist.

In response to this argument, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir.1992). In this case, Granger suggested mixture of antagonist and their salts, and it would have been obvious to one having ordinary skill in the art at he time of the invention to provide transdermal patch comprising opioid analgesic and antagonist in the free base or salt form as disclosed by US '538, and use both the free base and salt of the antagonist motivated by the knowledge available to the skilled artisan that salts and free bases of the drugs have different solubility and bioavailability and combination of both will provide different release time providing prolonged period of release instead of having the antagonist in one form that has the same release period, with reasonable expectation of having the transdermal patch comprising opioid analgesic and antagonist in the free base and in the salt form to provide prolonged release of the antagonist all through the use time of the device. Therefore, one having ordinary skill in the art would have modified the disclosure of Granger to achieve the present invention. In considering the disclosure of the reference, it is proper to take into account not only the specific teachings of the reference but also the inferences which one skilled in the art would reasonably be expected to draw therefrom. In re Preda, 401 F.2d 825, 826, 159 USPQ 342,344 (CCPA 1968). The rational to modify or to combine the prior art does not have to be expressly stated in the prior art; the rational may be expressly or impliedly contained in the prior art or it may be reasoned from knowledge generally available to one of ordinary skill in the art. The reason or motivation to modify the reference may often suggest what the inventor has done, but for a different purpose or to solve different problem. It is not necessary that the prior art suggest the combination or modification to achieve the same advantage or result discovered by applicant. In re Linter, 458 F.2d 1013, 173 USPQ 560 (CCPA 1972). In any event, Granger at col.5, lines 26-39, teaches the antagonists, either free base form or salt form, and in particular at lines 36-38, Granger teaches mixture thereof. Granger teaches and suggests the combination and mixtures of the antagonists in the free base form and their salts. The expression "comprising" of the claims' language permits the presence of other elements such as the impermeable barrier. The antagonist disclosed by the reference is also present any where in the matrix.

In the light of the foregoing discussion, the Examiner's ultimate legal conclusion is that the subject matter defined by the claims would

have been prima facie obvious within the meaning of 35 U.S.C. 103 (a).
